

DESCRIPTION

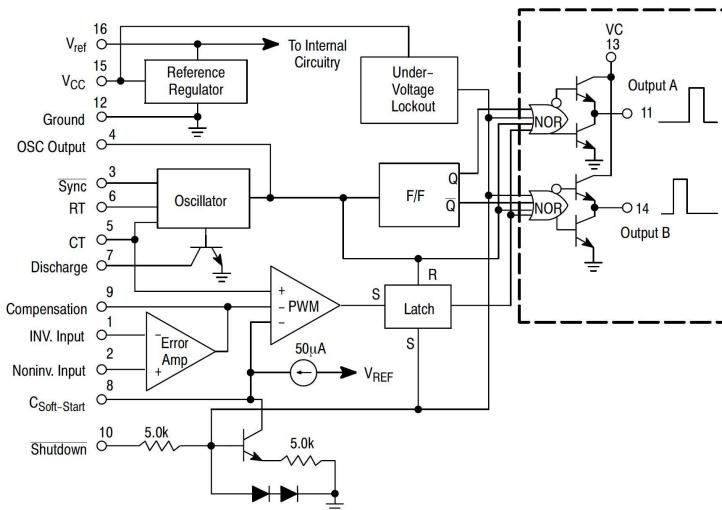

The on-chip +5.1 V reference is trimmed to 1% and the error amplifier has an input common-mode voltage range that includes the reference voltage, thus eliminating the need for external divider resistors. A sync input to the oscillator enables multiple units to be slaved or a single unit to be synchronized to an external system clock. A wide range of deadtime can be programmed by a single resistor connected between the CT and Discharge pins. This device also features built-in soft-start circuitry, requiring only an external timing capacitor.

The output stages are totem-pole design capable of sinking and sourcing in excess of 150 mA. The output stage of the CN3525 features NOR logic resulting in a low output for an off-state.

FEATURES

- 8.0 V to 35 V Operation
- 5.1 V 1.0% Trimmed Reference
- 100 Hz to 500 kHz Oscillator Range

Simplified Schematic

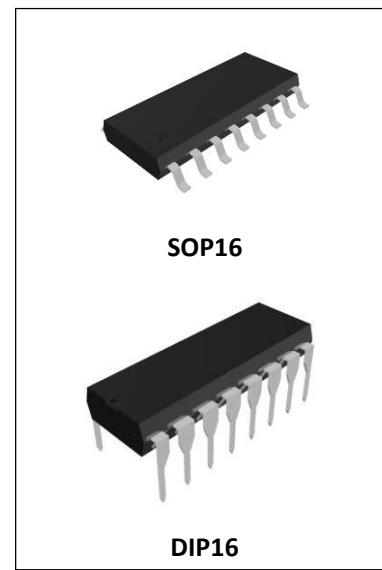

- Separate Oscillator Sync Pin
- Adjustable Deadtime Control
- Internal SOFT-START
- Pulse-by-Pulse Shutdown
- Input Undervoltage Lockout
- Latching PWM to Prevent Multiple Pulses

APPLICATIONS

- electric welding machine
- DC-AC inverter
